Table of Contents

1. Introduction

Golden Energy Full with AI (GEFAI) Golden Energy Full with AI (GEFAI) is a "GEFAI" coin that uses blockchain technology and artificial intelligence (AI) to convert our body's biological energy and economic energy, an essential energy of life, into "money". This is a project with the goal of satisfying members who have .

2. Problem Statement

Although the average human lifespan has increased significantly in modern society, two important energy sources are becoming scarce. The first is the energy needed to maintain physical health and prevent aging, and the second is the financial energy essential to leading our lives.

1). Lack of healthy energy:

- a. The development of medical technology has made a significant contribution to extending human lifespan, and now the average lifespan of mankind is increasing to the extent that the human lifespan can reach 100 or 120 years. Furthermore, aging itself is not viewed as a flow of human birth, old age, illness, and death; It has reached the stage of being defined as a disease.
- b. Life expectancy is increasing, but due to a lack of anti-aging ingredients such as the antioxidant resveratrol, youth is not maintained and aging is worsening.
- c. Therefore, health and quality of life are deteriorating due to suffering from functional disorders and diseases resulting from the degeneration process of various organs.

2) lack of financial energy:

- a. Many people are experiencing financial stress due to economic imbalance and uncertainty.

- b. The already entrenched economic and financial system only protects the rights and interests of vested interests and provides only enough benefits to enable the low-income or absolute poor to survive.
- c. Ultimately, the centralized economic and financial system is trying to control even the coin ecosystem by incorporating it into the centralized economic sphere.
- d. Therefore, the quality of life of low-income people, absolute poor people, and unemployed young people is deteriorating due to lack of stable financial energy.

3. Solution

Golden Energy Full with AI (GEFAI) provides the following solutions to solve the two main problems mentioned above:

1) Bio Golden Energy Supplement:

- a. GEFAI researches and produces resveratrol, an antioxidant, and develops and distributes resveratrol-containing foods and functional products that can supplement our bodies.
- b. As revealed in many research papers, resveratrol is a representative antioxidant and anti-aging ingredient, and when consumed regularly, it can extend human lifespan by about 20 years and maintain youth.
- c. Generally, the resveratrol content of peanuts is about 0.01 to 0.09 mg per 100 g, and the resveratrol content of peanut sprouts is about 0.13 to 0.25 mg per 100 g. Peanut sprouts contain 10 to 20 times more resveratrol than peanuts, as the resveratrol content increases rapidly during the sprouting process.
- d. Therefore, we established a smart farm using these peanut sprouts, and by developing, producing, and distributing foods and functional foods made from peanut sprouts, users can replenish "Golden Energy" to maintain health and prevent aging. can.

2) Replenish financial energy:

- a. The coin ecosystem is a new economic and financial ecosystem created by blockchain technology with the motto of decentralization and decentralization of all economics and finance. Therefore, it is attracting attention as a means for young people and low-income people to achieve economic freedom.
- b. All financial products (stocks, minerals, currency, cryptocurrency, etc.) have price increases and decreases, and profits are made by analyzing the flow patterns and investing. However, the reason why many people fail in trading is due to various factors such as inability to control emotions, brain trading, misjudgment of buying and selling timing, etc. human analysis
- c. So, in order to dramatically reduce the probability of failure and maximize profits, we want to build a trading center with artificial intelligence computers.
- d. By purchasing and staking GEFAl coins, we will make it an investment that does not fail and allow you to gain financial freedom together. GEFAl Coin Staking will allow users to replenish their financial energy.

4. Token Information

- a. Coin Name: Golden Energy Full with AI
- b. Symbol: GEFAl4)
- c. Network: TRC-20
- d. Total issued quantity: 10 billion
- e. Publication date: April 30, 2024

5. Technical Details

GEFAl operates on the TRC-20 network and provides the following technical capabilities:

a. Advantages of TRC-20 Network

a. High processing speed and low fees:

The Tron network boasts high processing speeds, capable of processing over 2,000 transactions per second. This is much faster than other blockchain networks such as Ethereum. Transaction fees are very low, allowing users to transact at low cost. This is one of the main advantages of the Tron network.

b. Scalability:

Tron offers high scalability and can support large-scale applications. This is very advantageous for DApp developers. We are further improving scalability and performance through continuous network upgrades.

c. Energy system:

The Tron network uses an energy and bandwidth system to allow users to save on transaction fees. Users can stake their Tron (TRX) to earn energy, which can be used to run smart contracts for free.

d. Strong community and ecosystem:

Tron has an active community and ecosystem, and various DApps and projects are operating on the Tron network. Popular projects such as BitTorrent are also based on the Tron network.

2) Differences from other networks Ethereum (ERC-20) :

a. Ethereum (ERC-20): Transaction speeds and fees:

The Ethereum network is currently transitioning from Proof of Work (PoW) to Proof of Stake (PoS), but it still suffers from slow transaction speeds and high fees. On the other hand, the Tron network offers fast transaction speeds and low fees. Scalability: Ethereum is introducing various solutions to solve scalability issues, but Tron already has high scalability, which is advantageous for DApp developers.

b. Binance Smart Chain (BEP-20):

Centralization controversy: Binance Smart Chain has been criticized for being a centralized network operated by Binance. The Tron network has a more decentralized network structure. Transaction Fees: BSC offers lower transaction fees compared to Ethereum, but the Tron network offers even lower transaction fees than BSC.

c. Solana (SPL):

Transaction Speed: Solana boasts very fast transaction speeds, but the Tron network is also fast enough and operates reliably for longer periods of time. Decentralization: Solana may fall slightly short of Tron in terms of decentralization due to its relatively small number of validators on the network. Tron operates its network with more validators.

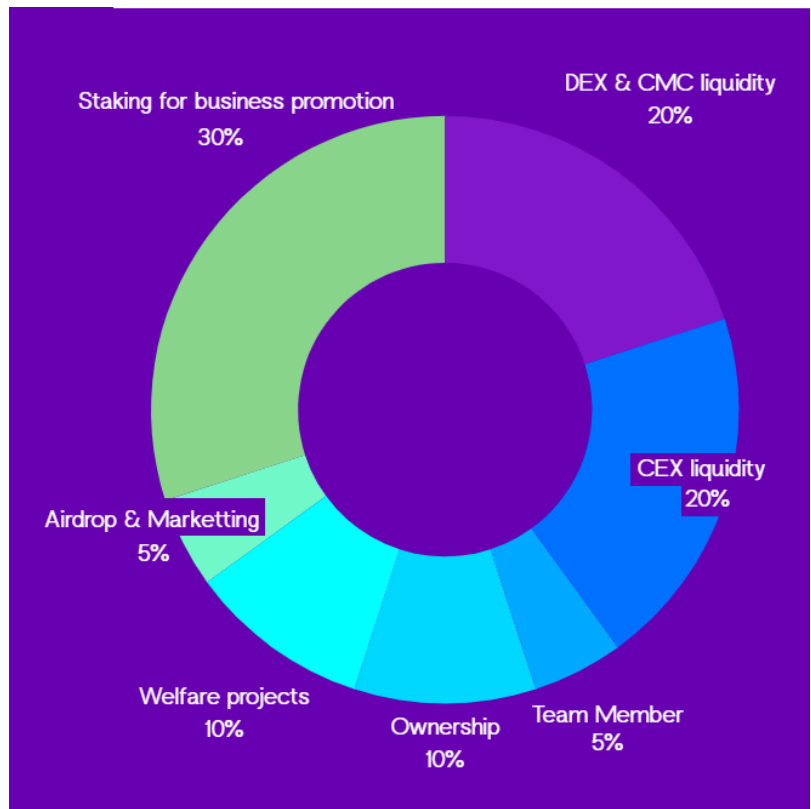

3) Conclusion

a. The TRC-20 network has various advantages, including high processing speed, low transaction fees, scalability, energy system, and strong community and ecosystem. These features differentiate it from other networks such as Ethereum, Binance Smart Chain, and Solana, and explain why the GEFAl project chose the TRC-20 network.

6. Token Distribution & Burning

1) GEFAl's token distribution plan is as follows:

- 40% liquidity pool(DEX, CMC, CEX)
- 5% Air drop & Marketing
- 30% Investment New technology(preordination)
- 10% Welfare project
- 5% Team Members & Reserves
- 10% Ownership

2) GEFAl coin burning

GEFAl coin incineration is done like this.

- -. 10% of the staking sales amount is transferred to the welfare project account.
- -. When welfare projects are carried out, GEFAl coins are incinerated after executing in cash.
- -. All staked coins will be burned when staking is terminated.
- -. Coins allocated for marketing may be burned after achieving their purpose.

7. Roadmap

- **April 2024: GEFAl coin issuance**
- **June 2024: 1st air drop conducted**
- **November 2024: DEX exchange listing**
- **November 2024: 2nd air drop conducted**
- **May 2025: Listed on CMC Exchange**
- **May 2025: 3rd air drop conducted**
- **November 2025: CEX exchange listing**
- **November 2025: Establishment of Resveratrol Research Institute**
- **April 2026: Establishment of product factory, production of products**
- **June 2026: Global shopping mall opened**
- **August 2026: Commercialization of wastewater purification system modularization and distribution business**

8. Team

Introducing the project team members and their key careers and roles:

- **CEO:** [Serafin Mundo], [Career]
- **CTO:** : [Name], [Career]
- **Marketing Director:** [Name], [Career]
- **Development Team:** [Name], [Career]
- **Legal Advisor:** [Name], [Career]

9. Community and Partnerships

1) Community action plan

a. Activate the online community platform:

Social Media: We share the latest news and updates through various social media platforms, including Twitter, Facebook, and Instagram.

Messenger groups: We operate official groups in Telegram, Discord, KakaoTalk, etc. to communicate with users in real time.

Forums: Enable discussions about the GEFAl project on forums such as Reddit and Bitcointalk.

b. Regular updates and newsletters:

Newsletter: We send out a monthly newsletter to share project progress, key updates, events and announcements.

Blog: Post in-depth analysis, technical details, development updates, etc. through a blogging platform such as Medium.

c. Community events and campaigns:

Airdrop: To attract early users, we are holding an airdrop event where GEFAI tokens are distributed for free.

Contests and Contests: Encourage user participation by holding various contests, such as meme contests and video creation contests.

Bug Bounty Program: To increase the security of the project, we operate a program that provides rewards to users who discover bugs.

d. Training and Workshops:

Webinar: We regularly hold educational seminars on blockchain, AI, GEFAI projects, etc.

Offline Workshops: We hold offline workshops in major cities to communicate and educate users directly.

e. Partnerships and Collaborations:

Partnership Events: Benefit the community through collaborative events with key partners.

Collaborative projects: Collaborate with other blockchain projects to hold joint events and achieve mutual growth.

f. Collect feedback and suggestions:

Community feedback sessions: We regularly hold feedback sessions with the community to collect and reflect user opinions.

Survey: We conduct surveys to determine user satisfaction with the project and areas for improvement.

2) Main Partner: [Partner Name], [Partner Role]

[Uniswap], [DEX Exchange]

[Pancake Swap], [DEX Exchange]

[CoinMarketCap], [CMC Exchange]

[Binance], [CEX Exchange]

[OKX], [CEX Exchange]

[Bitget], [CEX Exchange]

[MEXC], [CEX Exchange]

10. Business Details

The GEFAl project promotes various projects to replenish health and financial energy. As one of them, we hope to contribute to replenishing financial energy by establishing an "AI Trading Center" together with a peanut sprout cultivation factory.

1) Peanut sprout cultivation plant

Purpose of establishment: Peanut sprouts are rich in antioxidants such as resveratrol, which are very beneficial to health. GEFAl grows these peanut sprouts on a large scale to produce health supplements and supply them to the market to improve the health of users.

a. Initial establishment costs:

- . Factory rental cost: \$100,000 (based on 3300m²)
- . Facility construction cost: \$100,000 (\$10,000)
- . Equipment and machinery costs: \$100,000 (dryers, crushers, packers, etc.)
- . Labor costs: \$100,000 (annual)
- . Operating Funding: \$100,000 (per year)
- . Total establishment cost: \$500,000

b. Realize profit:

- . Product production cost: All costs incurred in producing the product, including peanut seeds, factory rental costs, labor costs, electricity bills, water bills, etc.
- . Product price: production cost + profit (approximately 20%)
- . Sales profit: 20%
- . Production cycle: 6 days (5 harvests possible in 1 month)
- . Monthly profit margin: 20%
- . After deducting 10% VAT
- . Investor profit dividend: 4.5% weekly, 20% monthly dividend
- . 10% of profit is set aside for depreciation costs and facility expansion.
- . If the production cycle is shortened from 6 days to 5 days by introducing artificial intelligence computers to control the growth cycle, profits will increase accordingly.

2) Building an AI Trading Center

Purpose of establishment: AI Trading Center aims to replenish users' financial energy by utilizing artificial intelligence to perform automated trading in the financial markets. This allows users to realize stable and high profits.

In general, investors who find it difficult to build an AI trading system individually can invest in our AI trading center and receive dividends.

a. GEFAI Staking

- . **Investment amount: At least 500\$**
- . **Investment period: at least 4 months**
- . **Cancellation: Full or partial cancellation possible after 4 months**
- . **Profit dividend: 4.5% per week (compound interest increases during the deposit period)**
- . **Referral allowance: 10%**
- . **Profit dividend date: Every Friday at 12pm (Singapore Standard Time)**

b. Trading chart example

- Bitcoin (BTC) 5 minutes May 22, 2024

- Bitcoin (BTC) 15 minutes May 20-22, 202

- Ethereum (ETH) 5 minutes May 22, 2024

- Ethereum (ETH) 15 minutes May 20-22, 2024

- Dogecoin (DOGE) 5 minutes May 22, 2024

- Dogecoin (DOGE) 15 minutes May 20-22, 2024

c. Establishment costs:

- Software development cost: \$20,000.00
- Hardware and infrastructure cost: \$100,000 (\$10,000 per AI computer)
- Labor Cost: \$50,000 (per year)
- Operating funds: \$30,000 (per year) ~ Internet usage fees, electricity bills, etc.
- Total establishment cost: \$200,000

d. Take Profit

	1 week profit	monthly profit	year revenue
If the profit is 2% per day	14%	60%	720%
If the profit is 3% per day	21%	90%	1080%
If the profit is 4% per day	28%	120%	1440%
If the profit is 5% per day	35%	150%	1800%
weekly profit dividend	4.5%		

The AI Trading Center will play an important role in increasing the value of GEFAI coins and providing stable financial energy to users.

3) Other profitable businesses

a. profit business

- Anti-aging research center and product production
- Wastewater purification system modularization and distribution project
- Building an AI Trading Center
- Mine development and resource trade such as gold and copper
- Discovering and nurturing new technology businesses

b. welfare projects

- Expansion of facilities and welfare support for single mothers
- Project to support underprivileged children

- Establishment of a natural healing and healing center

c. "GEFAI" coin holder benefits

- It is used as a transaction fee when opening your own exchange (DEX, CEX).
- Realize profits through staking
- Realize profits due to increase in coin value
- Dividend income from investments in new technologies or profitable businesses. etc.

11. Conclusion

The GEFAI project was created to supplement the two types of energy that have become scarce due to the extension of human lifespan. One is "Golden Energy" for health, and the other is "Golden Energy" for financial stability and growth.

Health supplement

- 1) Peanut sprout cultivation plant produces health supplements rich in antioxidants such as resveratrol to improve the health of users. This solves the health problems of modern people and helps them lead healthier lives.

2) Financial stability

AI Trading Center helps users achieve financial stability and growth through automated financial transactions using artificial intelligence. This provides stable profits to users and contributes to increasing the value of GEFAI tokens.

3) Core values of the project

a. innovative technology

The GEFAI project leverages the TRC-20 network to enable fast and low-cost transactions. This provides convenience and efficiency to users and takes full advantage of the TRC-20

network.

b. sustainable business model

Peanut sprout cultivation factory and AI trading center are the two main business models that ensure the sustainability of the GEFAl project. This ensures long-term growth and stability for your project.

c. strong community

We plan various community activities to maintain close communication with users, increase user participation, and strengthen the credibility of the project. This is an important factor for the success of the GEFAl project.

4) Future vision

More than just a cryptocurrency project, the GEFAl project aims to solve two major problems: health and financial security. GEFAl will continue to focus on providing a better life for users through technological innovation and sustainable business models.

- a. Global Expansion: The GEFAl project will expand globally to benefit more users.
- b. Continuous research and development: Through continuous research and development on health supplements and AI trading technology, we will provide the best solutions to users.
- c. Strengthening partnerships: We will expand the GEFAl ecosystem and create more opportunities through partnerships with various industries.

The GEFAl project is an innovative solution that takes responsibility for users' health and finances at the same time, helping everyone live a better life. We ask for your continued interest and participation. End.
